

**Business Technology. Managed.**

# Managed IT Services, Cloud, and Technology Consulting.

MNX Solutions delivers efficient IT management, maintenance and support to our customers on a fixed monthly contract basis, using remote monitoring and management technology.

As a result, our customers experience an overall lower cost of owning and supporting IT, enjoy predictable costs, and avoid large unplanned expenses.

## Managed IT Services

Our comprehensive, proactive approach to technology keeps your business systems humming smoothly. Our managed services program covers 100% of your IT needs including PC's, servers, security, network, backups, phone systems and much more.

### *Stay One Step Ahead of the Problem*

- We work with your team to understand how we can help you leverage technology to better your business.
- We deploy a multi-layer defense in depth security architecture to prevent ransomware and malware.
- Preventative monitoring & patching of your network to remotely address potential points of failure before they become critical.
- Offsite backup and disaster recovery design, testing, and monitoring.
- We'll meet regularly to discuss the overall health and performance of your IT assets and ways to get the most out of your investments.

Getting more for less is a goal for every single company, but this is especially true for small companies. Using cloud computing can reduce costs – from the initial investment and operating costs, to IT costs and even energy costs, as there is less need today to keep servers and other powerful systems running locally.

## Cybersecurity

---

A single data breach can shut down your business for good. At MNX, our cybersecurity solution ensures that never happens through constant monitoring by our cybersecurity experts and by installing automated, cutting-edge security software — all while remaining industry compliant.

## Managed Cloud

---

From Office 365, Azure and AWS, to private and hybrid cloud environments we help you manage, migrate and leverage cloud technology for your business.

## IT Strategy & Consulting

---

From cybersecurity to Industrial IoT, we can help your business leverage technology by providing strategic guidance.

## Business Voice

---

A complete cloud phone system — easy to setup and manage! Get the power of an enterprise-class phone system without the cost and complexity of an onsite PBX solution.
